A; Note: the list of introns is incomplete; defects in this gene can result in Ehlers-Dan C; Complex: type II collagen is a homotrinear of monomers initially linked by disulfide L C; Function:

A; Description: structural component of extracellular fibrous polymer that maintains inte C; Superfamily: collagen alpha I(I) chain; fibrillar collagen carboxyl-terminal homology; C; Keywords: coiled coil; Ehlers-Danlos syndrome; extracellular matrix; glycoprotein; hyd F; 1-23/Domain: adino-terminal propeptide #status predicted cARO>
F; 151-151/Domain: von Willebrand factor type C repeat homology cWC>
F; 151-151/Pomain: von Millebrand factor type C repeat homology cWC>
F; 154-157/Domain: amino-terminal nonhelical telopeptide
F; 158-1196/Region: halical
F; 158-1196/Region: carboxyl-terminal propeptide #status predicted cCR>
F; 1222-1466/Domain: fibrillar collagen carboxyl-terminal homology cFC>
F; 1238-1466/Domain: fibrillar collagen carboxyl-terminal homology cFC>
F; 153-154/Cleavage site: Pro-Gin (procollagen N-endopeptidase) #status predicted
F; 153-154/Modified site: pyrrolidone carboxylic acid (Gln) (in mature form) #status predicted
F; 151-121/Modified site: pyrrolidone (Lys) #status predicted
F; 161, 1212/Modified site: allysine (Lys) #status predicted
         3-hydroxylated. About 15% of the lysines are 5-hydroxylated and some are subsequently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

A; Notes: frameshift mutation from a patient with Alport syndrome; five other mutations are
C; Comment: Prolines and lysines at the third position of the tripeptide repeating unit (c) and subsequently O-glycosylated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A; Map position: Xq22-Xq22

A; Note: the alpha 5(IV) and alpha 6(IV) chain genes are encoded on opposite strands with C;Complex: This minor type IV collagen is thought to form a heterotrimer of two alpha 5(mong trimer amino-terminal domains (with disulfide and desmosine cross-links), dimeric as er associations in the interrupted helical domain (with disulfide and desmosine cross-links).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A,Gene: GDB:COL4A5; ATS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sinciples: 29/1
Cisuperfamily: collagen alpha 1(1) chain; fibrillar collagen carboxyl-terminal homology;
Cisuperfamily: collagen alpha 1(1) chain; fibrillar collagen carboxyl-terminal homology;
Ciseywords: colled coil; extracellular matrix; glycoprotein; sulfoprotein; trimer; triple;
Ciseywords: coilagen sequence #status predicted <51G>
Fil-24/Domain: sugnal sequence #status predicted <51G>
Fil-24/Domain: on willabrand factor type C repeat homology <WWC>
Fil-25-154/Domain: collagen alpha 1(III) chain (fragment) #status predicted <MAT>
Fil-488/Product: collagen alpha 1(III) chain (fragment) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R.Miller, E.J.; Lunde, L.G.
Biochemistry 12, 3153-3159, 1973
A;Title: Isolation and characterization of the cyanogen bromide peptides from the alphal
A;Reference number: A90369; MUID:73258693; PMID:4732855
A;Contents: composition of CNBr1 and CNBr4

A; Note: mutant sequence from partient with metaphyseal chondrodysplasia type Schmid
A; Note: a second mutant sequence with 614-fro is also described
C; Comment: Prolines and lysines at the third position of the tripeptide repeating unit
ed and subsequently O-glycosylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 C,Superfamily: collagen alpha 1(VIII) chain; complement Clq carboxyl-terminal homology C,Superfamily: colled coil; extracellular matrix; glycoprotein; homotrimer; hydroxylysine; F;1-18/Domain: signal sequence #status predicted <SIG>F;1-18/Product: collagen alpha 1(X) chain #status predicted <MAT>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: a defect in this gene may cause Schmid metaphyseal chondrodysplasia; complex: type X collagen may be a homotrimer
